## Project Introduction

---

Our team will develop a **smart flight check-in kiosk software** for British Airways in a few weeks using **agile methods**. We will conduct a systematic requirements survey, analysis and design, followed by writing implementation and testing of the software. We will deliver **four major iterations** in a planned manner.

## Features

---

- Passengers look for their own booking information.
  - Passengers choose seats.
  - Passengers choose meals.
  - Passengers can check in.
  - Passengers can print tags.
  - Administrator can login.
  - Administrator can view all the passengers' information.(coming soon)
-

# Quick Start : How to run our project

§§ **jdk 17 and Maven 3.8.1 are required**

## 1. Use IDE

Our project was developed using **JetBrains IntelliJ IDEA** compiler. You can simply open this project folder in IDEA, wait for **Maven** to automatically complete the project build, and click the green triangle next to the application startup class **Main.java** to run it.

## 2. Use the command line

Go to the project folder.

Execute the command **mvn clean javafx:run**

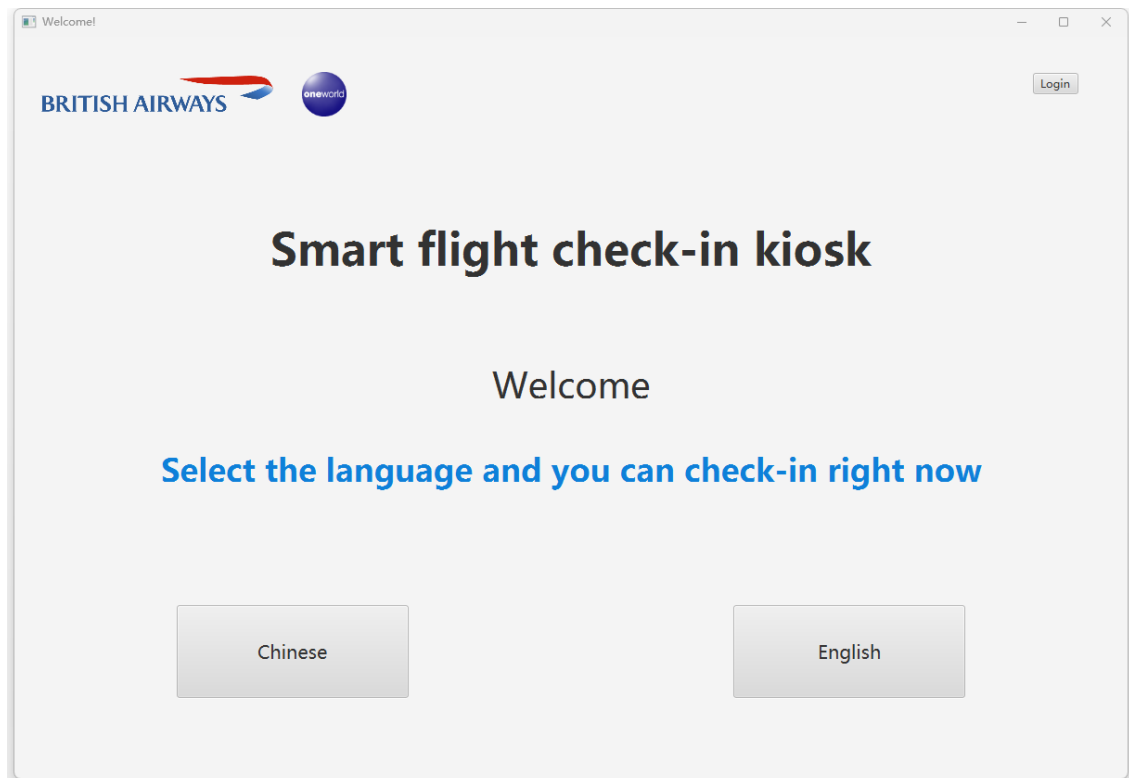

**For example:**

```
PS C:\Users\LianJunhong\Desktop> cd E:\Java\EBU6304_G058_flight
PS E:\Java\EBU6304_G058_flight> mvn clean javafx:run
```

Running result:

```
[INFO] Scanning for projects...

### 3. Use Jar or executable file

Coming soon...

---

## Requirements

---

- maven -- 3.8.1
- jdk -- 17

## Documentation

---

Coming soon...

---

## Iteration logs

---

## 2.0 (April 17, 2022) Latest version

- Further improve the basic functions of our page and realize the closed loop of basic operation logic.
- Integrate the administrator login function page.
- Implements the display of flight information (in the form of a list) and passenger selection of seats and meals.
- Several bugs fixed in this release.

## 1.5 (April 12, 2022)

- Fix bugs and complete the iteration of the 1.0 version.
- Finish the pages and complete the functions of booking and retrieve information.
- Change the design of flight and booking CSV data regardless of whether a passenger has more than one booking and flight.
- Implement the GetFlight and GetReservation interface and GetFlightImpl and GetReservationImpl class.

## 1.0 (March 28, 2022)

- Complete the first page about selecting a language.
- Make entity classes about version 1.0.
- Complete the programming of common tools related to CSV and JSON.
- Complete the design of the interface between boundary class and control class.
- Complete the login interface design and the implementation of the login function.

## 0.5 (March 21, 2022)

- Finally determine 28 user stories and acceptance criteria.
- Complete product prototype design using Axure.
- Complete the priority and Fibonacci story points (first version) .

## 0.1 (March 15, 2022)

- Set up the QMPlus Hub group and discuss the project handout.
- Discuss and write user stories focus on more specific and quantifiable details.
- Build project framework.

---

## Credits

We would first like to thank **Queen Mary University** and **Beijing University of Posts and Telecommunications** for the joint training program that provided much needed guidance and assistance for this course project.

Secondly, please allow us to express our sincere gratitude to **JetBrains** for providing free individual licenses for students and teachers to learn programming with its best-in-class development tools.
